

## NVI MP3 PLAYERS AND BINAURAL BEAT

All of the recorded work offered by New Vistas International (NVI) was created using state-of-the art technology. Our Guided Meditation recordings require high-quality audio devices to reproduce the entire sound spectrum for full effect. In addition to human voice and music provided on nearly every recording, New Vistas uses a technology known as “Binaural-Beat” to create a gentle brainwave entrainment effect. This frequency following process uses a principle similar to the Doppler Effect where the brain seeks to automatically decode the signals being sent to it to make sense of them. This very safe and effective technique was originally discovered in 1839, but not truly developed until the later part of the 20<sup>th</sup> Century. For more information, go here: [http://en.wikipedia.org/wiki/Binaural\\_beats](http://en.wikipedia.org/wiki/Binaural_beats)

NVI uses Binaural Beat to assist in relaxing the brain by sending a specific set of tones to the left and right ears that are offset by a precise frequency. The brain creates the missing signal and then resonates to it. For example, if a 440 Hz signal is sent to the left ear and a 435 Hz signal is sent the right ear, the missing 5 Hz signal is inferred by the brain. Since it is now focusing on creating the 5 Hz signal, the brainwaves predominately align to 5 Hz, which is the rate the brain operates at during deep relaxation. Conversely, if a 15 to 20 Hz signal is created, it assists the brain in focusing or awakening.

Binaural Beat has also been attributed to the healthy creation of a number of positive effects on the body, including increased learning rates, deeper, better quality sleep, regulation of the hormonal systems, and more. This technology is a foundational aspect of a number of products available in the market today, including the Monroe Institute’s [Hemi-Sync](#) offerings. New Vistas created a proprietary process to encode healing frequencies and create an auditory soundscape specifically focused on enhancing the therapeutic process.

NVI has carefully selected their MP3 Players and Earbuds to fully reproduce the required sound, and they can accept a micro SD chip for 100’s of hours of recordings. The advantage of using our MP3 Player is that the listener can enjoy a professionally guided meditation session at home with all the right equipment to hear it.
